Freescale™ QorIQ™ T4 6U VPX SBC

Embedded Computing
without Compromise

The C112 is Aitech's latest generation VPX PowerPC SBC, based on Freescale's new QorIQ T4 Series SoC multi-core, multi-thread processors.

The wide variety of on-board I/O and large memory resources, including on-board mass storage, in combination with the powerful SoC processor, make the C112 the right SBC for many applications, right out of the box. The two industry standard PMC/XMC slots provide flexibility and expandability, along with the availability, convenience, and cost benefits of COTS.

For improved security assurance, the C112 also includes the latest QorIQ Secure Boot and Trust Architecture 2.0.

To support Two Level Maintenance and provide ESD protection, the conduction-cooled C112 is available with a secondary side cover to supplement the full heatsink on the primary side.

C112 mechanical and electrical designs guarantee its operation over the full range of rugged application environments.
